Strength**

Venti Plus+™ Fabric

Applications

Venti Plus+™ Fabric

Venti Plus+™ Fabric

Emmbi has always strived for continuous development in all areas of product enhancement & in this spirit we have introduced Venti Plus+, an improved variant of the standard ventilated FIBC.

What differentiates our Venti Plus+ is that the vents are equally distributed on all sides of the FIBC instead of the regular 13 or 26 vents found in a ventilated bag.

Higher strength in same GSM.

Unique features of Venti Plus+ fabric:

- The Venti plus fabric is specifically designed to permit better air flow & strength throughout the bag.
- Various Sizes for Different Products.
- Specially designed to store items that require superior breathability.
- Prevents spoilage due to moisture and mold build-up.
- Aids proper Draining of Materials like wood pellets and logs.

Applications:

- Suitable for storage of-

1. Beans
2. Potatoes
3. Grains
4. Onions
5. Nuts
6. Wood Logs
7. Garbage

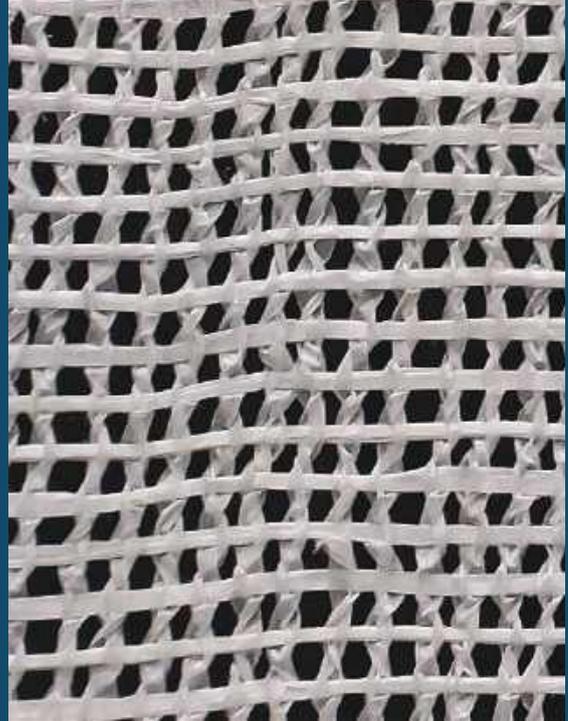

“High-Breath Technology”

Design & Feature Comparative

Regular Ventilated Fabric

Venti Plus+ Fabric

Ventilated Fabric

- 1. Less Ventilated**
39% Ventilation leading to 61% air blockage
- 2. Weak**
39% area of the bag carries the thread in only 1 direction
- 3. Old Technology**
20% higher stress due to Flat weaving technology

Venti Plus+ Fabric

- 1. Fully Ventilated**
100% area with Air Circulation
- 2. Strong**
100% area of the bag carries the thread in multilateral direction i.e.- More safe
- 3. State of the art modern technology**
Less stress due to flat circular knit technology
